

Jeff Billo is the Senior Manager of Transmission Planning at the Electric Reliability Council of Texas (ERCOT). In this role he oversees the near-term and long-term transmission planning efforts at ERCOT, including both steady-state and stability analyses. He actively participates on the ERCOT Reliability and Operations Subcommittee, Regional Planning Group, Planning Working Group, and Planning Geomagnetic Disturbance Task Force. Mr. Billo has been at ERCOT for fourteen years during which time he has held various roles in the area of Planning and was one of the principal planners for the Competitive Renewable Energy Zone (CREZ) project. He was also a member of the NERC PRC-025 Generator Relay Loadability Standard Drafting Team. Mr. Billo currently serves on the NERC Planning Committee and is Vice Chair of the NERC Inverter-Based Resource Performance Task Force. He has coauthored several IEEE papers on the topics of transmission planning and wind generation. Mr. Billo holds an MS in Electrical Engineering from The University of Texas at Austin in Austin, Texas and a BS in Mechanical Engineering from LeTourneau University in Longview, Texas.
